Wireless speed keeps dropping to 1Mbps, resolves when I reset connection? -
[Solved]

2020/07/25

For the past few days my wireless connection will drop from 75-100Mbps to 1Mbps, despite having "Excellent" signal strength, other machines connected to the wireless router do not experience this issue.If I disconnect and then reconnect to the network, the connection speed will go back to the usual 75-100 until the issue occurs again for whatever reason.I've got a wireless PCI Adapter card by Edimax, it's been working flawlessly for a year until now.Any advice would be greatly appreciated in figuring out what's causing this?
