2G/3G/WIFI/GPS Jamming Range 1-10m Output Port Five Ports Changeable Signal  
GPS/VHF/UHF Product Image: FAQ: Why is there still a signal on the phone's  
signal indicator when it works? A: It's just an illusion. In fact, the mobile phone has  
been unable to communicate. When you press the pull button, you will find that there  
is no signal on the signal indicator. The cell phone signal shield will not interfere with  
the normal work of other electronic devices. The antenna should be installed on the  
corresponding signs of each channel on the host, and then connected to the host  
power supply. The effective coverage of the shield is a circular area centered around  
the shield, so be careful to choose the location of the shield so as to avoid blocking  
the dead Angle? A: No. This is because the electromagnetic signal emitted by the cell  
phone's signal shield is completely within the country's mobile operating band, which  
only blocks mobile communication. And this signal is always in a relatively static  
state, and will not affect any electronic equipment. Are cell phone signal Jammer  
harmful to people and mobile phones? A: Please rest assured that the  
electromagnetic signal intensity emitted by the cell phone signal Jammer is very  
weak. The test data indicates that this signal strength is far from harmful to the  
human body. At the same time, the mobile phone signal shield is just blocking the  
forward signal of the phone, so that the cell phone cannot be connected with the base  
station, so there will be no damage to the phone itself. Is there any difference  
between the effective shielding distance of the mobile phone signal shield in indoor  
and outdoor use? A: There are. The effective shielding distance (30-40 meters) of the  
cell phone signal shield is generally referred to as indoor distance. In open areas, the  
effective distance of shielding can be several hundred meters. It should be noted,  
whether they are within the room, or in outdoor use, effective shielding effect of  
shielding distance has relationship with environmental conditions, such as from the  
base station near and far, placed, etc. Therefore, when using cell phone signal shield,  
this factor should be fully taken into account to avoid blocking the dead Angle and  
thus affect the shielding effect. Is the cellular signal shield the same for GSM mobile  
phones and CDMA mobile phones? A: that's a good question. Because CDMA mobile  
phone's anti-interference performance is far superior to that of GSM mobile phone,  
the effective shielding distance for CDMA mobile phone is smaller than that of GSM  
mobile phone, but the difference is not very large, about 2-4 meters. But it also  
reminds users to pay attention to some particularly important sites, and should  
increase the number of mobile phone signal blockers when necessary to ensure the  
shielding effect of CDMA mobile phones. After working for a period of time, the  
mobile phone signal mask is hot. Will working long hours damage the machine? A:  
thank you for your care. This is a normal phenomenon. In the design, we use the  
thermal conductivity of aluminum alloy to assist the heat dissipation. This can  
guarantee long time stable work. As a result, the machine will not damage the  
machine.
